healthCare cybernetics (hCc) is an independent private sector think and do tank (of internationally distributed *wise heads*).

It provides knowledge, analysis and strategic thought on specific Healthcare Domains.

We additionally collaborate and partner with domain stakeholders to initiate and implement national- and regional-level Domain Integration and Development Projects.

hCc started life as a R&D project in 1997 (with an agenda to develop infrastructure and technologies) and incorporated as a Limited Liability Company in 2003.

Our headquarters are in the process of moving to Dubai (UAE).

An affiliate will continue to be based in Athens, Greece, to continue work on development projects already initiated.

hCc is currently engaged in Domain Integration and Enterprise Development projects in a number of countries.
